OBJECTIVE

Software engineering students interested in Frontend Developer are looking for internship opportunities to use my knowledge to help develop projects and want to gain experience. in knowledge development

EDUCATION

Bachelor of Science in Software Engineering

Nakhon Pathom Rajabhat University, Nakhon Pathom, Thailand
Expected Graduation: April, 2025

SKILLS & TOOLS

- Github actions
- Figma
- PostgreSQL
- Tailwind CSS

LANGUAGES & FRAMEWORKS & OTHERS

- JavaScript
- Node.js
- Blockchain & Smart contract
- ER Diagram
- React.js
- Express
- MongoDB

SENIOR PROJECT

Grade System: An app for filling in grades for easy submission of graduations

December 2023 – Present

Project Overview

Create a web application to make it easier for you to fill out grades to submit a certificate of completion, as many universities have trouble filling out grades on their own and making mistakes. Therefore, we have developed a Fill in the grade website to reduce time and help correct errors in filling out grades.

KEY RESPONSIBILITIES

Frontend:

- Create responsive and interactive user interfaces using React.js and Tailwind CSS to ensure a seamless user experience across different devices and screen sizes.
- Implement client-side routing with React Router to create a multi-page application, enabling smooth and fast navigation between different pages without reloading the entire application.

PREVIOUS PROJECTS

SE-E-commerce
-It is a project to make a shop website for branches.

mernblog
-It is a website for writing blogs and articles.

mern-chat
-It is a chat website that allows users to send messages to talk to each other.

CERTIFICATE

TU-Mobile Application Design (Figma) Intermediate level
TU-Web Application Development (Full Stack) Intermediate level
Python Programming preliminary
